

Day 53 Task

Http package

1. Create a simple server using http package and show “hello world” response on localhost:8900

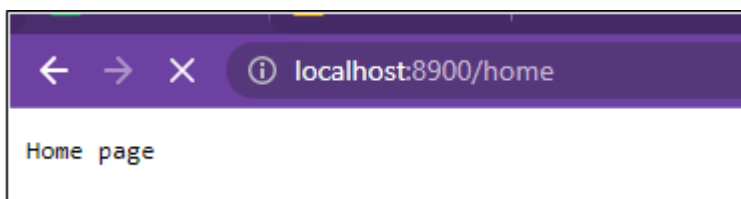

The expected output is shown below.

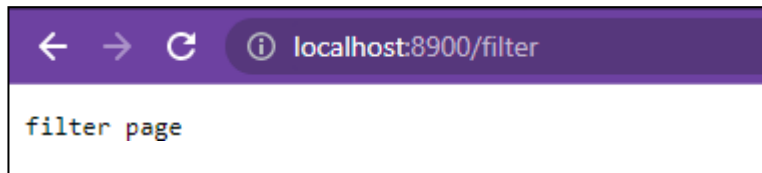

2. Create a server using http package and define three routes namely home, filter, details and print different text for each different route. Print “page not found”, if route other than home, filter and details is given.

The expected output is shown below.

Home page:

Filter page

Details page
